

Improving security at Ahuja Tower with GateGuard

Mumbai · Ahuja Tower

A 53-storey high-rise needed tighter vehicle access without the peak-hour queues that came with manual checks.

Overview

Ahuja Tower, a prestigious high-rise in Mumbai, faced challenges managing access control while keeping residents and visitors secure. Stellarview's GateGuard ANPR system was selected to modernise entry and exit without disrupting daily operations.

The challenge

- Unauthorised vehicles entering through outdated access methods
- Manual checks causing congestion during peak hours
- Wait times of up to 10 minutes at entry points
- No real-time view of vehicles entering and leaving

The solution

GateGuard ANPR was integrated with the existing boom barriers. Authorised plates open access automatically; everything else is logged for security review. High-resolution capture and plate matching keep the flow moving while management gets data to tune peak-hour staffing.

Impact

- Unauthorised vehicles blocked at the gate instead of inside the premises
- Significantly shorter entry and exit times, with fewer queues
- Traffic-pattern insight for staffing and visitor protocols

Conclusion

GateGuard shows how ANPR can raise security for a large residential tower while making the gate experience faster for residents and guests.
