

Vehicle tracking for a safer school campus

Pune · Millennium International School

A day-boarding school needed complete visibility of vehicles at the gate — without relying on incomplete manual registers.

Overview

Millennium International School in Pune wanted stronger control over who entered and left campus. GateGuard ANPR cameras were installed at entry and exit gates to log every vehicle automatically.

The challenge

- Limited monitoring of vehicles entering and exiting the premises
- Unauthorised and public vehicles creating security risks
- Manual processes that could not keep reliable records

The solution

ANPR cameras at entry and exit capture plates in real time, log every movement, and raise alerts for vehicles that should not be on campus. Deployment started with a site assessment, then camera placement and integration with campus operations.

Impact

- 100% record-keeping of vehicles entering and exiting
- Clear reduction in unauthorised vehicle access
- Staff reported higher security confidence; parents praised the proactive measures

Conclusion

GateGuard gave the school a complete, automated picture of vehicle movement — improving safety without slowing pick-up and drop-off.
